President's Report
By Daniel Powers

Fellow Members,

I am pleased to present the President's Report following our April 15, 2026, Board of Directors meeting. We had strong board attendance and covered numerous topics related to our club's leadership, finances, facilities, and operations. Below is a full account of the discussions and decisions from that evening.

The board reviewed several nominations for open Board of Director positions. Mike Samuelson was nominated for Vice President. We also acknowledge that Paul Matzen has announced his intention to step down at the time of renewal. We are grateful for his dedicated service to the club.

Dave Stone has resigned as The Cast Newsletter Editor, with the August 2026 issue being his last one. The club will seek a replacement. Soon, we will provide members with more details about this important volunteer position and opportunity.

Tracie Koenig, Treasurer, delivered the current financial report, noting that our bank balance is $34,691. This is the highest balance we have ever had. The Winter Dinner yielded a net profit of $7,117, demonstrating the dedication and effort of all the volunteer individuals and donors involved in the event. Thank you donors and volunteers. That amount is the highest income we have had from data

back to 2018 reflecting the highest profit for the raffle and silent auction.

The Board approved raising annual membership dues from $50 to $60, starting July 1, 2026. This increase is driven by the future need for a pond liner. The additional income generated from the dues increase will be set aside to replace the club's pond liner, a project estimated to cost at least $40,000 according to RRFF member Scott Thomas (reported by Mike Spurlocks's discussion with Scott following the Board Meeting). This increase was carefully considered. Your membership supports and includes a wide range of programs and benefits: organized fishing outings, casting clinics, a mentorship program, Women's Group, monthly Board and General Meetings held both in person and via Zoom, guest presentations by experienced anglers, raffles, social events, access to the club pond, fly-fishing educational classes, monthly newsletter, and swag merchandise. These programs rely on continuous funding. The Board is dedicated to managing club resources responsibly to ensure reliable facilities and programs for our members.

Steve Tubbs stated that after recently draining the pond and cleaning the liner, no issues were found. This allows us valuable time for liner planning.

Mike Spurlock reminded the Board of the importance of continuing to sell fly-fishing equipment currently stored in Don Shaw's "doghouse" shed and Mike's home garage. Mike Samuelson, mentioned outside the Board meeting, he knows of additional items that could be put up for sale to boost revenue.

The Board noted the importance of using the Square Point of Sale invoicing app to support payments for dues collection and payments for club outings.

The meeting was productive and our Board's commitment to the club's health and future is clear.

Look for another message about The Cast Newsletter Editor position, and feel free to reach out with any questions, feedback, or suggestions at any time.

Respectfully,

Daniel Powers, President

RRFF General Meeting
By Mike Borba

Brian Slusser, owner of Four Seasons Fly Fishing in Truckee, is our May General Meeting's speaker. He will discuss dry fly presentation to trout and fishing the north fork of the Yuba River.

Espiritu Santo Bay (ESB) Memoir
Quintana Roo, Yucatán, Mexico
By Dave Stone

Sian Ka'an, meaning "Origin of the Sky" in Mayan, is a 1.3-million-acre UNESCO World Heritage site since 1986. It is a remote, protected Biosphere Reserve and home to over 300 bird species, diverse wildlife (including jaguars, ocelots, and pumas, & crocodiles), a variety of plants, and fish.

It was easy to image the meaning of Sian Ka'an. Each day, we travelled swiftly across the ESB in a small three-person boat powered by its 50-horse Yamaha motor. From the middle of the bay, we could look up at the sky dome and at the surrounding horizons where slow moving cumulus clouds dominated a blue bird sky.

While flying south from Cancún to ESB Lodge, Mike Benkert captured a photo of "The Glory" an optical phenomenon that formed a halo around the plane's shadow on the clouds.

The beauty was unobstructed by tall hotels or mountains, reflecting the Mayan view of the sky's origin. Only the distant threads of mangrove trees or the Caribbean Sea blended into Planet Earth's horizon.

Large crocodile sunning on a storm-damaged sailboat wedged in the mangroves.

Mike Spurlock and I were there to hunt permit, but also snook, tarpon, bonefish, and barracuda were hopefully in the mix.

At this time of year, juvenile permit gather within ESB searching for prey on sandy seagrass flats. As those juveniles age, they shift to solitary hunting. Even with their tall pancake-shaped bodies, these fish move easily through shallow waters, at times just two feet deep. Permit are famously wary, which makes them one of the more challenging catches for fly fishers.

Caribbean Sea. A light-emitting cumulus sunrise. The lodge's large palapa deck offered a different look each morning before we were shuttled to our boats to fish.

Mike Spurlock gives boat poling a try. Is he truly poling? You had to be there.

Mike and I were paired up with our first day's guide. The guide knew where to look for permit. When the guide found them, I was struck by the school's counterclockwise swirling motion. Sunlight reflected off their pale bodies, periodically producing micro-

sun-flashes that forced me to blink. This entire phenomenon was exciting to watch.

I was first up on the boat's casting platform. But I was so excited that I struggled to cast properly. I was mesmerized by the swirling school of permit. I tried my best to cast at the outer edge of the school to encourage a permit to take my ESB Yellow Eye Raghead Crab fly without spooking the school. I had one permit follow my fly as I stripped line for maybe two seconds before it spun back into the school. Eventually, the permit school moved out of our casting range.

No takers, no interest. That experience reminded me of former Dallas Cowboys quarterback and Monday Night Football commentator Don Meredith, who often remarked on Monday nights, "Turn the Lights Out; The Party's Over." Was fly fishing for a permit already finished? I thought it had to get better.

At the end of the first day, I reflected on that experience and decided to approach the next day of fly fishing with focused composure. Mike and I successfully caught several bonefish; however, the species we were primarily targeting managed to evade us completely.

Mike Spurlock with one of his bonefish.

We were a group of eight men who filled up the ESB Lodge, all interested in permit. On the first day, Rob Kinsley, from Pennsylvania, hooked a permit raising the group's spirits. We celebrated the occasion with the lodge's tradition of drinking a tequila shot at the start of dinner to celebrate our group's first permit hooked. That night, Rob sat at the head of the dinner table and lifted his tequila shot glass up with enthusiasm before downing it.

The second day, Mike Benkert, from San Francisco's South Bay, landed a permit. At this point, the group's spirits seemed to soar with excitement. That night filled me with anticipation.

Mike Benkert joined Russian River Fly Fishers after Mike Spurlock, and I explained the benefits of our club and membership. He's a great guy. I hope all of you will meet him someday.

The days that followed were mostly unproductive for Mike Spurlock and me. The second morning with a new guide, Mike and the guide were after a permit. It turned into a chasing battle for the guide poling with much muscle and forte and Mike poised to hook one. Mike had several shots at permit that day, but again no interest from those super cautious fish.

Afterward, the permit seemed to disappear for the remainder of the trip. It's possible they moved from ESB to the nearby Caribbean Sea for deeper water action. That experience reminded us of our good friend and RRFF member, Lee Soares and his favorite adage, "That's fishing!"

On the third day, and for the rest of the trip—I did not see a permit nor did anyone land one.

Andy Benkert and guide with a good size snook.

Besides fishing, the positives were far and wide. The lodge's costal jungle location was awesome. Mara,

EBS House Manager, reported seeing a jaguar while leaving the lodge to retire to the employee's residence not far from the lodge. Mara's experience kept me from walking the jungle's rough and narrow dirt road at night to star gaze.

Dave blind-casted and hooked an ESB Moon Snapper (a flashy consolation prize). I gave it to our guide, who cooked and shared it that night with his guide friends.

Our gang of fly-fishers were relaxed, friendly, and smart guys. We all bonded and became friends.

Clockwise, the ESB fly fisher gang starting with Mike S., (lower left), George, Rob, Steve, Lou, Andy, guides, Mike B., guide & Dave, more guides and Mara in floral black dress.

Mara and JP were the lodge managers. They took care of us. Mara and JP were from Argentina, spoke excellent English. Both were up early each morning. They made sure our needs were met, like early morning coffee and taking our orders for that day's breakfast, boat lunches, and dinner.

Then there was 27-year-old chef—Poncho (below photo left column). He and his kitchen staff prepared a variety of top-shelf meals. Pancho set a high standard of excellence each day. When we came back from our eight-hour adventures on the water, his appetizers and Mara's flavorful fruit drinks—served chilled in glasses rimmed with a mixture of salt and a dash of pepper, were always ready and waiting for us. Downing the drinks and munching on the nibbles warmed us up for another fantastic dinner. The managers and the staff worked well together making our stay easy and comfortable.

I enjoy meeting new people and making friends while exchanging stories about fly fishing and life in general. This was easy to do at the ESB Lodge. The food, service, and location were extraordinary.

Steelhead in the Classroom Report

By Karl Joost

How do we know if the Steelhead in the Classroom program is successful? The answer is in the numbers and the overwhelming interest from Sonoma County teachers wanting to join, because of the positive reactions witnessed among their students.

Steelhead egg deliverers, February 11, 2026. Can you pick out all the RRFF members?

This year, 102 classrooms each received 50 steelhead eggs to hatch and release into local creeks or the Russian River mainstem. Over 25 of these 102 teachers were brand new to the program and the remainder were returning. Some classrooms have participated in this program for a decade or longer.

RRFF, RETU (Redwood Empire Trout Unlimited), and Sonoma Water fund SIC annually. This year's funds purchased 20 tanks, assembled by volunteers. These tanks let children observe steelhead eggs as they develop into alevin, then maturing into its fry phase.

At that stage, the children eventually release the fry into nearby Russian River tributaries or the mainstem.

RRFF tank builders. L to R: Glen Stanley, (Tom Greer, & Tim Reuling in the background), and Mike Borba.

The tanks include chillers, pumps, filters, gravel, and insulation. Those components complete each tank kit for the classroom costing approximately $300.

Excited children view the steelhead eggs.

Fourth grade children watch teacher Bill Kobabe carefully drop steelhead eggs into their tank.

Eggs were delivered to classrooms on February 11 and March 25 this year with the skilled help from over 20 RRFF volunteer drivers. Without this support, the program would not be possible. The drivers and folks who helped assemble the tank equipment are truly the lifeblood of making this program successful.

This year, CDFW hired Sabreena Britt as regional coordinator of the SIC program. She organized the certification task for new teachers, actively participated in egg deliveries, and participates in SIC meetings. Working with her and David Berman from Sonoma Water has been enjoyable and productive. David leads locally, and Sabreena's team maintains strong communication support which constantly improves the program.

Sabreena's Steeliemobile

Clear Lake Outing Report

By Ed Barich

Friday evening potluck at Clear Lake State Park.

On the weekend of April 16-19, a group of RRFF members including outing leader Don Shaw, Pam Boyd DeCoite, Ed Barich, Mike Borba, Gregg Wrisley, Tim Reuling, Gary Hollinger, Tom Moore and Tony Powell, gathered at Clear Lake State Park to do some early season warm-water fly fishing on the largest

natural lake entirely within California. It was our club's first camping trip of the new year, and we were blessed with reasonably warm days and pleasant campground surroundings.

Don with his crappie.

Clear Lake is known as one of the premier bass lakes in the US, but our quarry was a panfish called crappie that are plentiful and fun to catch with a fly rod. We picked this weekend to coincide with the start of the crappie spawning period, when they are most active and cooperative. On our floating fly lines, we used "float-n-fly" rigs, which consist of 1/32 oz. feathered jig tied to the end of an 8-foot mono leader. An indicator (float) is attached to the leader above the jig so that the fly is suspended a foot or so above the lake bottom or submerged weeds. The crappies tend to hang out along the edge of shoreline tules where the water depth is 7 to 9 feet. When the rig is cast near the tules, the jig quickly sinks and swings under the float, attracting a fish. If you don't get a bite in under 30 seconds, it's best to cast to another spot until you get some action. Sometimes having some chop on the surface also helps to give the fly action that induces a grab.

Although crappie don't fight as hard as a bass, the Clear Lake variety run 12 to 14 inches and can put a respectable bend in a 5-weight rod. When you get into a school of crappie, the bite can be fast and furious. This year most of our action was found along the rocks, tules and boat docks found in nearby Soda Bay. Those spots required gas-powered boats to access, but closer to camp there were also fish to be caught from human-powered craft. Each year the lake fishes differently, and the challenge is to locate our quarry and find the most effective methods to catch them.

Pam on the prowl for crappies.

In the evenings we gathered at Don and Jan Shaw's campsite for potluck dinners. Our thanks to both for providing tasty dishes, as well as the others who brought good food and drink to share. Also, thanks to Tom who supplied some seasoned cedar firewood. There's nothing better than sitting around a warm fire on a cool evening next to the lake with your fly-fishing friends.

Click link to see more Clear Lake photos located in our website.

Casting for Recovery (CfR) Report
By Paul Matzen

The Casting for Recovery (CfR) retreat was held at Indian Creek Lodge on April 12, 2026. This year we had 6 RRFF members representing our club at the retreat.

I want to thank Jeff Cratty, Penelope Gadd Coster, Michael Tibbets, Genie Praetzel, and Pamela Boyd Decoite for signing up as river helpers. This year, the weather turned out to be cold and rainy, but that did not dampen the spirits or excitement from the CfR participants once they got to the Trinity River to fish.

Most women have never fished before or waded to fly fish. For all CfR participants, it was their first time on the river and for all, an adventure too. For the CfR women, there were several hooked fish throughout the day on the river which made it even more fun. We fished below the dam in Lewiston and the flows were tolerable.

CfR staff excelled in organizing this year's retreat. I also want to thank the other river helpers from the various clubs in our area that always show up to help. Thank you to the RRFF Board and our membership too for their continued support to Casting for Recovery during all these years.

Thank you
Doug Mackay, Pond Steward and Volunteers

Editor—Doug and his RRFF volunteers cleaned up the pond liner for our club, even working through a bit of rain on April 11, 2026, and did it with fewer than the optimal number of volunteers. Click link for more photos.

Our club appreciates those of you that volunteer each year for this important task. I visited the pond on April 23rd and took the following photo.

On 4/23/2026, I observed minimal slit accumulation on the liner during an early session of casting practice.

I received the following photos from Ed Barich. They show RRFF members and friends slogging up and down the emptied pond, getting it hosed down with fresh water, brushed, and cleaned. Thanks again for your time and muscle. Click link for more website pond photos.

Broom brigade pushing silty pond water toward drain.

Broom brigade walk back to repeat sweep.

Fly Fishing Puerto Rico
By Mike Spurlock

In April 2026, six of us traveled to Puerto Rico for a fishing trip and stayed at a lodge managed by the company, "No Name Lodge." The lodge is in Salinas, a small community situated along the southern Caribbean coast of Puerto Rico.

PR map with red circle indicating the area of Salinas.

The fly fishers included Mike Spurlock, Gregg Wrisley, Rick Baker, Steve Sapers, Glen Stanley and his friend, Willard Ferrell. This group fished for the primary

species that can be caught there: baby tarpon (10-50 lb.), permit, and snook.

Prior to this trip, none of us had previously visited Puerto Rico. We departed from San Francisco International Airport and traveled overnight to Miami, followed by a 2.5-hour flight to San Juan, the capital of Puerto Rico. Upon arrival at San Juan, we were met by drivers to take us across the island to Salinas. It is a small town with narrow streets, and our lodge was a small comfortable rental right on the edge of the Caribbean Sea. It included a swimming pool which was nice to use when we returned from fishing each day. We shared rooms, and Benny, our chef, had a fourth room. He handled shopping and prepared breakfast and lunch. Benny cooked dinner when we stayed in. On other nights, we dined at local restaurants with the guides.

Puerto Rico is a US territory where Spanish and English are spoken. Residents are US citizens but cannot vote for president.

Lunch break on the way to Salinas.

As we drove across the island, we stopped to eat lunch at a local restaurant which had rotisserie chicken and pork. It was mid-day and the place was very busy with local people which was a good sign.

Three guides assisted us, two originating from Florida and one from Texas. Each had experience working in Puerto Rico during part of the year. During our initial afternoon, the guides pulled us together so they could provide an orientation for the week ahead.

The guides met us at the lodge each morning around 6 or 7 AM. They stayed in town nearby. They rotated through our group daily and each guide took two anglers fishing each day for eight hours. Depending on their plan, we either boarded boats at the lodge to fish nearby waters or rode in a pickup towing a boat to a fishing spot 20 to 60 minutes away.

Mike releasing his tarpon.

Tarpon was the primary quarry and the fishing gear used were 9 wt., 9 ft rods with tropical floating lines with 10 ft. leader/tippet of 60/40 lb. fluorocarbon. An additional rod was available for permit which were 9 wt., 9 ft rods with floating lines with 10 ft of fluorocarbon leader/tippet 20/15 lb. The lodge provided their Hardy fly rods and reels for free if we wanted to use them. Flies were also provided. The fly sizes for tarpon came in 1/0 or 2/0, mimicking baitfish in all different colors and for permit the sizes were 4/0 to 1/0 in various types of flies.

Rick Baker releasing his tarpon

Our best fishing was found in a location about an hour's drive west of Salinas, about halfway to the western side of Puerto Rico, just west of Ponce. The cove there had a lot of small fish that the pelicans were feeding on. The pelicans would see an area where the small fish were assembling, and they would

dive into that group and come up gobbling their catch. Meanwhile, tarpon, typically found in groups, would recognize the presence of food and swim by to prey on the smaller fish. When guides noticed a pelican attack nearby, they quickly poled to the spot and signaled us to cast toward the tarpon. Most of the time, we would get a strike or a hookup. This action would generally go on between 10 AM and noon. then that battle tapered off. When activity slowed, the guides moved to familiar shoreline spots where tree shade provided cover for fish.

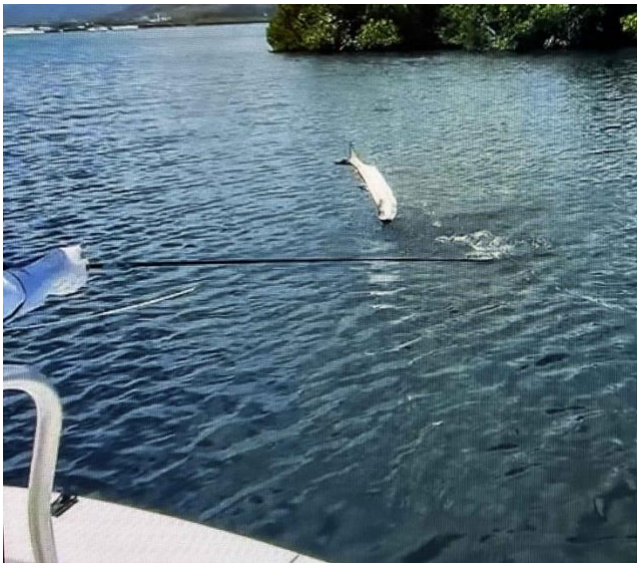
Gregg fighting a tarpon. Guide, Rick and Steve in other boat.

For tarpon action videos, click link posted on the website by Mike Spurlock. They feature Rick Baker, Mike Spurlock, and Gregg Wrisley successfully hooking baby tarpon. The videos came from one of the guides named Jake. He had a video recorder incorporated in his Meta sunglasses.

Guide preparing to release Glen's snook.

Catching a baby tarpon is a ton of fun. When it jumps, the angler needs to "bow to the king" meaning as soon as the tarpon breaks the surface, it's time to drop the rod tip and point it directly at the tarpon with full arm extension. This important method will avoid pulling the fly out of its large mouth while it's in the air. The worst thing one can do is execute a "trout set" which is to raise the rod tip and tighten up the rod bend as you would perform when fishing for trout. If that happens when the tarpon jumps, it's likely the tarpon will spit the hook.

Permit are also present in Puerto Rico waters in the flats. These fish are highly valued by anglers. Although we made efforts to hook them, their numbers appeared to be limited during our trip. We only saw two and they did not want to eat our flies.



Gregg fighting an acrobatic tarpon.

Iguana are found in the trees along the water. They are an invasive, excellent swimmers, feed on a variety of local plants, bird eggs, small crabs, and bird chicks.

The company, "The No Name Lodge" has another lodge in Puerto Rico on the west side of the island. It is near a small town called Boqueron. I am considering giving this location a shot in 2027.

PR guide, Mike, and Gregg on deck pursing tarpon.

Russian River Fly Fishers Membership Application

(if possible, we prefer that you use the on-line application on our website where you can also pay online: https://www.rrflyfisher.org/membership-application--payment.html

I acknowledge in this agreement, and fully understand, that it is a release of liability. I further acknowledge that I am waiving any right that I may have to bring legal action or to assert a claim against Russian River Fly Fishers (RRFF) for its negligence. This agreement is valid for all RRFF sanctioned events, (fishing outings, picnics, dinner fund raisers, meetings, pond casting clinics, etc.) some of which are open to the public and all of which are covered by RRFF insurance. As a club member you are approved to participate in certain covered events which are not available to non-members: fishing outings and training for fly-casting certification.

Note: Private activities arranged by club members (not sponsored or approved by the club) are not sanctioned and will not be covered by RRFF insurance.

I have read this statement and agree to its terms as a condition of my membership in the Russian River Fly Fishers.
